The importance of version control....

- Imagine you drafted an excellent paragraph for a paper you are writing, but later ruin it. How would you retrieve the *excellent* version of your conclusion? Is it even possible?
- Imagine you have 5 co-authors. How would you manage the changes and comments they make to your paper? If you use LibreOffice Writer or Microsoft Word, what happens if you accept changes made using the Track Changes option? Do you have a history of those changes?

Version control is like an unlimited “undo” *and* allows many people to work in parallel!

Record your progress

Two users make independent changes – “conflict”

Incorporate two sets of changes into same base document

Some definitions

- **Version control** – a system for keeping snapshots of your work
- **git** – version control software
- **GitHub** – one of several cloud-based systems for working with git

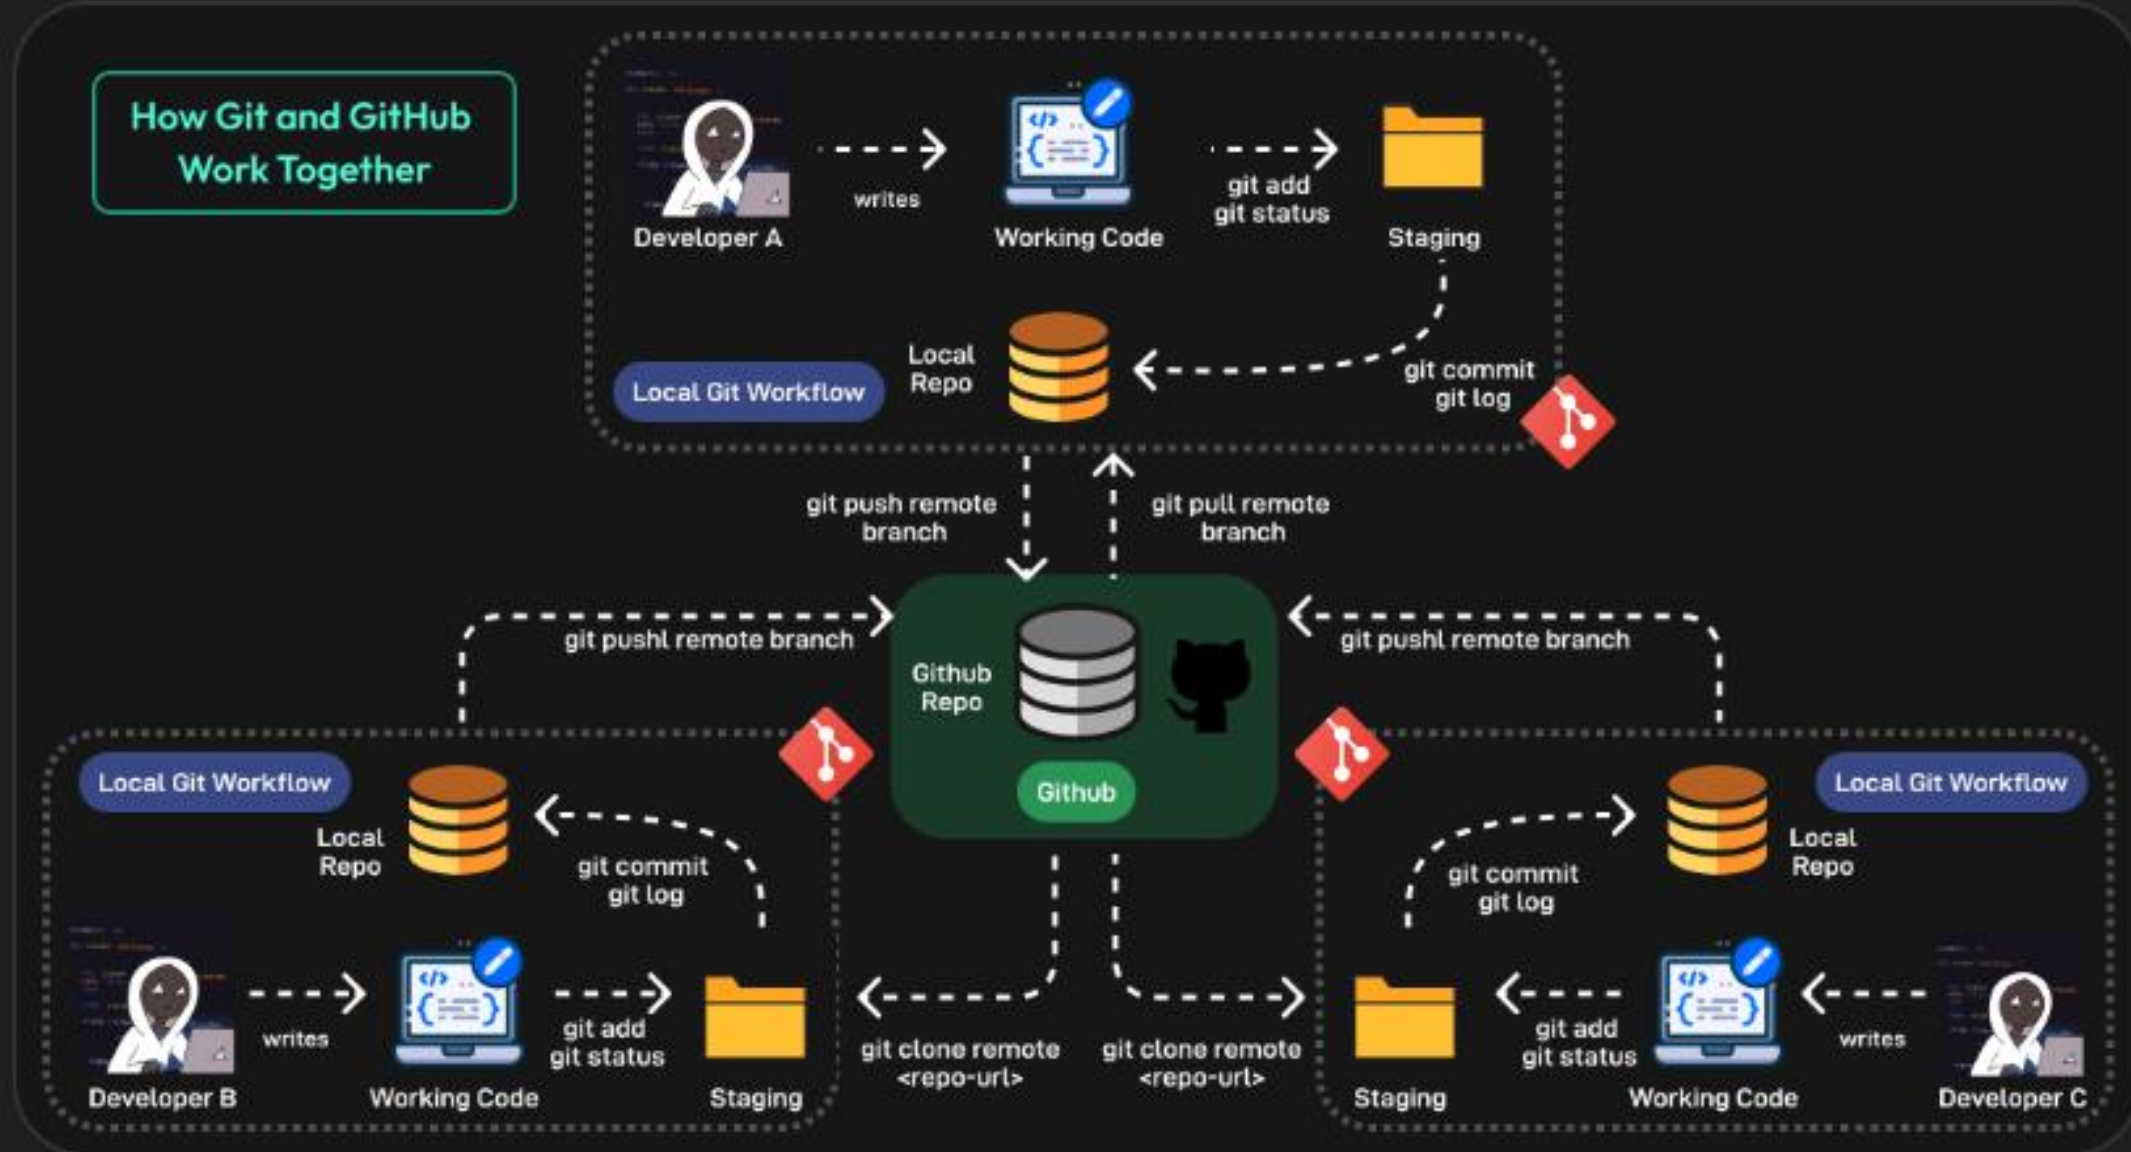

Local

Remote

Git versus GitHub

How Git and GitHub Work Together

Git vs GitHub Comparison

Git

GitHub

Type

Git is a free, open-source version control tool

GitHub is a cloud-based, pay-for-use service that runs Git in the cloud

Installation

Git is installed locally on a developer's machine

GitHub is hosted in the cloud

Ownership

Git is maintained by the Linux Foundation

GitHub is owned by Microsoft

Use

Tool to manage different versions of edits, made to files in a git repository

It is a space to upload a copy of the Git repository

Features

Version control and source code management

Hosting code, collaboration, and project management

Tools

Minimal external tool configuration

Active marketplace for tool integration

Brief practice with GitHub

Let's try something basic

Resources

The world is your oyster! But here are a few to get you started:
